

Science is based on religious principles

Religion Says:

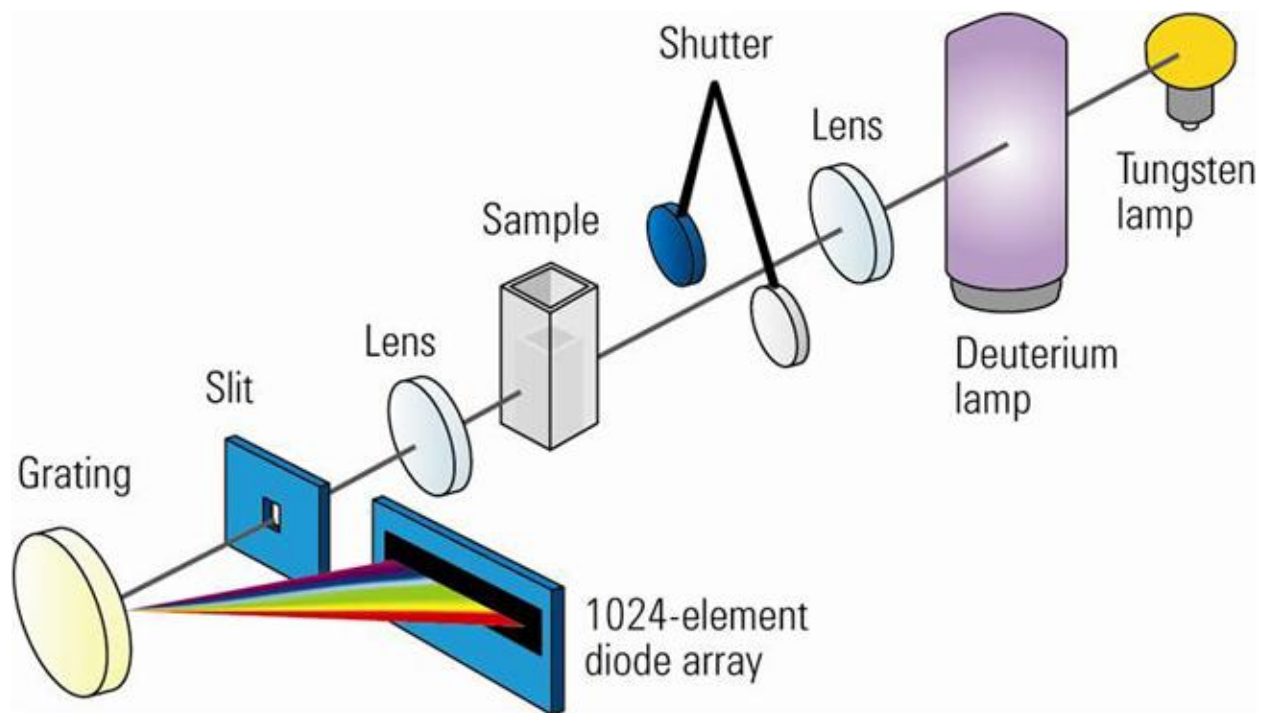

1. நிழலிருந்து நிழலைத்தந்த பொருளையும் அப்பொருளின் தன்மையையும் அறியமுடியும்.
2. Recognizing the Creator in Creation/Through Creation to the Creator
3. God created man in his own image.

Science (spectroscopy) Says:

1. The object and its properties can be known from its image.
2. From 'image of an object' to the object and its properties. (image is nothing but the light intensity pattern – captured on screen/photographic plate/PMT/further converted to a graph

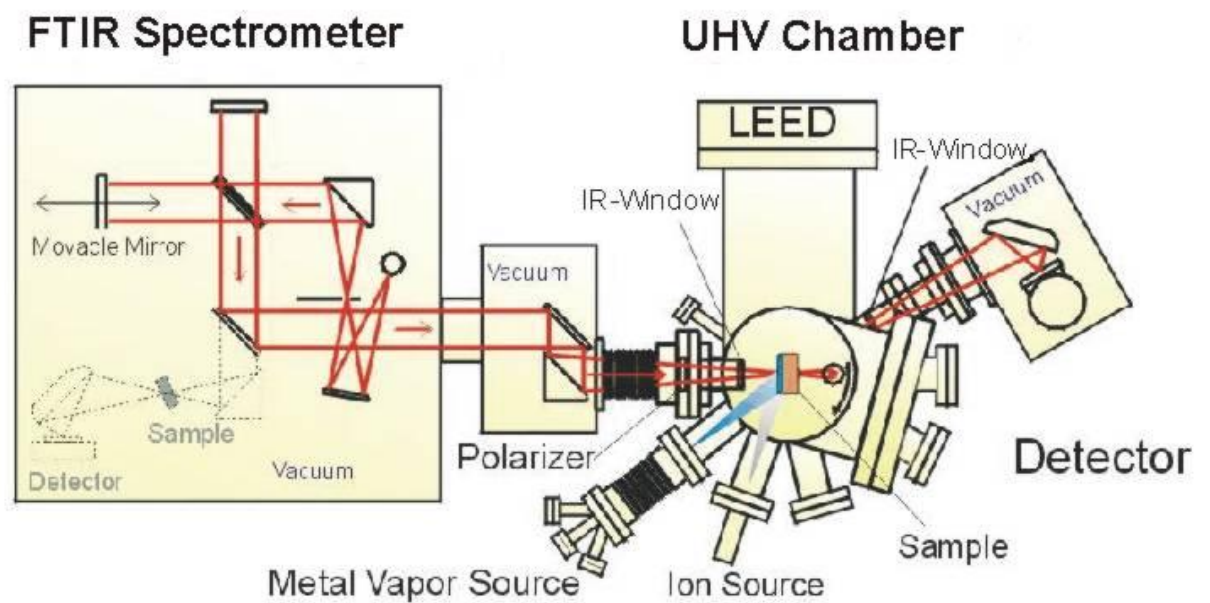

From the output intensity pattern, recognize the object and its properties.

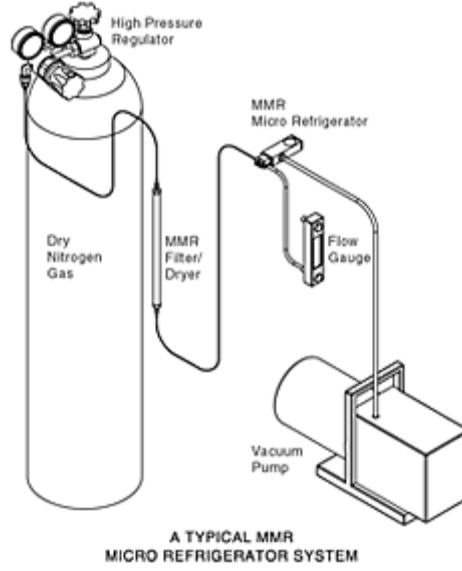

Block diagram of a particle size spectrophotometer

(Recognize the object in the image of the object)

Recognize the object in the image of the object (IR intensity pattern)

Recognize the object from the NMR signal

Don't you think science is based on religious principles?
